

Why Paxton Access?

Choosing an access control system is an important financial decision for most companies. The cost is of course important, but the system also needs to match your requirements and be completely reliable. Paxton gives the benefit of additional security without requiring time-consuming administration. Paxton Access systems are intuitive and straightforward to administer.

Key benefits of Paxton Access systems:

- Reliable, high quality systems: We are confident of our quality and back our components with a 5-year warranty. [Our warranty.](#)
- Systems that are incredibly easy to use: Minimal training required for administrators.
- Systems that are designed to grow with your needs: You can add doors as and when needed.
- Net2 Software: No hidden/unexpected costs or per seat licenses. Software can be installed on as many workstations as required.
- Free software upgrades: Net2 software upgrades are free! You are able to take advantage of new features that will be of benefit to you.

Which System?

1. Standalone access control. This type of system may be used to control access on one or many independent doors in a building. Standalone systems are great for smaller sites with a relatively small number of users, token management is simple, and the system can be extended easily as your requirements change. Typical applications:

- Small business premises
- Sports clubs
- Storage units

2. PC based access control. PC based systems are great for medium to large sites as they make managing large numbers of doors and users easy. The system can be extended very easily, and advanced features such as event reporting and integration with CCTV and other systems make such a system much more than just a replacement for a bunch of keys. Typical applications

- Small/medium premises
- Large corporate premises
- Multiple-site premises
- Government buildings
- Universities
- Sports clubs
- Parking lots

Entry Panels

Net2 Entry is a door entry system that works as a standalone system or alongside Paxton's Net2 access control, combining door entry with key features of Net2. Net2 Entry consists of 3 components that auto-detect on set up; external panel, interior monitor and door control unit.

- Vandal resistant, standard and touch screen panel available
- IK10 rated VR panel for ultimate impact resistance
- Pan/tilt camera functionality to capture an angled view
- Reads EM, Paxton and MIFARE® token technology
- Built-in keypad and RFID reader
- Comes in flush, surface mount or rain hood options
- IP and PoE technology for easy expansion
- SIP compatible

Monitors

Net2 Entry is an intercom system that works standalone or alongside Paxton's Net2 access control, combining intercom with key features of Net2. Net2 Entry consists of 3 components that auto-detect on set up; external panel, interior monitor and door control unit.

- Three designs of the monitor available
- Intuitive, color touchscreen internal monitor option
- Can be used via handset for private calls or in hands free mode
- Can be wall or desk mounted
- IP and PoE technology for easy expansion
- No need for specialist wiring diagrams
- Video voicemail option
- NEW Audio only monitor now available
